

Understanding your needs, providing robust concept designs and ensuring you have a sound specification to go out to tender.

MID excel at the early client support and the close interaction required at the concept development stage of maritime projects.

With that foundation, MID can provide certainty to our clients' needs with continuity of technical support right through the preparation of specifications, the tendering process, contract negotiations, the detailed design work to the construction and trials of the project.

We will understand the key objectives you are looking to achieve and the constraints of your business. We ensure that you can take these goals and limitations through to an outcome that not only achieves your aspirations, but importantly avoids the pitfalls, costs and stress that can plague a poorly initiated project.

This is where MID excels. Success is achieved by doing thorough work, using proven knowledge to a clear understanding of what our customers need to achieve. Setting these foundations with our clients at the outset of their project is hugely valuable.

“This is very specialised work and there are very few marine engineer design companies in NZ who can do these projects”

Fred Smits, NIWA

“MID is a Capability Provider, an Enabler to ensure the success of our clients. Through our experience, our clients obtain advantage.”

Sandy Munro, MID

“There would be no-one else in New Zealand with the tug and barge experience that the MID team has.”

Ian Coombridge, PB Sea-Tow
